WHY SALVATERRA

More value for your spaces.

01 Solar power without a roof

Generate energy in your garden, on your terrace or in your courtyard. Greenery and design enhance your spaces and make your sustainable choice visible.

02 Green partitions that generate energy

Organise gardens, outdoor dining areas and pathways with planters that furnish spaces, create privacy and turn a partition into an energy-generating surface.

03 Easier installation and cleaning

A self-supporting structure for low-impact installation. Panels accessible from ground level make cleaning and inspections easier.

04 Modular and multifunctional

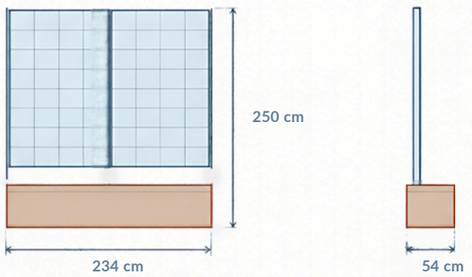

Place several planters side by side and extend the arrangement over time. Depending on the configuration, add lighting, e-bike charging, bicycle racks and other services.

Four models. Your solution.

Choose the shape, space and functions you need.

PRIME SALVA TERRA

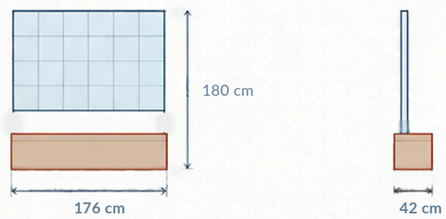

Energy that grows with your project.

2 photovoltaic modules Modular arrangements

LIGHT SALVA TERRA

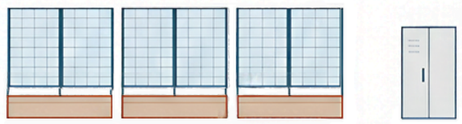

Energy and design for compact spaces.

1 photovoltaic module Compact footprint

SURVIVAL SALVA TERRA

Energy for work, even off-grid.

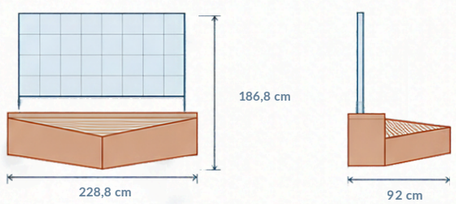

From 3 Prime units + technical cabinet with storage

Each Prime: 234 × 54 × H 250 cm
Cabinet: 120 × 60 × H 200 cm*

* Indicative dimensions; may vary by project.

Deluxe SALVA TERRA

Energy, hospitality and communication.

Bench included - Rear advertising panel

Illustrative diagrams, not construction drawings. Dimensions in centimetres. Deluxe includes the bench. Installation and equipment are defined according to the model and project.

Simplicity and beauty.

Our idea of SalvaTerra.

SALVATERRA DELUXE / Project rendering

We imagined a simple, beautiful way to generate energy. That is how SalvaTerra began: a planter bringing together nature, clean energy and harmony. In the garden, on a terrace or at a company entrance, greenery and photovoltaics become part of the spaces we use. To furnish outdoor areas, create green partitions and give places new functions. A simple idea to care for the earth and make the world around us more beautiful.

When energy becomes beauty, the world is transformed.

More functions.

One space. More possibilities.

For hotels, businesses, public spaces and landscape projects.

GREENERY, CORTEN AND INTEGRATED FUNCTIONS

01 / SITE CAMERA

An eye on your spaces.

A camera can provide video surveillance of entrances, car parks and shared areas. Connection, field of view and image management are defined for each project.

02 / CORTEN PLANTER

Greenery takes shape.

The Corten steel planter holds plants and organises spaces. Used alone or in groups, it furnishes entrances, gardens and outdoor dining areas with green partitions that generate energy.

03 / MICROINVERTER

From sunlight to your energy needs.

In grid-connected models, it converts the modules' energy into AC power for the installation. Connections and protection devices are defined according to the configuration and project.

04 / E-BIKE CHARGING

A stop that recharges.

E-bike charging sockets add a useful service for guests, staff and cycle tourists. The power supply and energy availability depend on the chosen configuration.

09 / CONNECTIVITY AND MONITORING

Energy under control.

Where the configuration allows, connectivity provides access to energy data and remote monitoring of compatible devices.

05 / LED LIGHTING

A welcome, even after dark.

Lighting enhances entrances and pathways, improves visibility and makes outdoor spaces easier to use. Depending on the configuration, motion sensors can be integrated.

VERTICAL MODULES / INSTALLATION DETAIL

06 / PHOTOVOLTAIC MODULES

Energy beyond the roof.

Vertical modules generate energy in outdoor spaces. Bifacial glass-glass versions also collect light on the rear when exposed, making use of the installation's position and orientation.

07 / BICYCLE RACK

More order. A better welcome.

The bicycle rack organises parking near hotels, offices and communal areas. A practical function integrated into the furniture, without adding separate elements.

08 / IRRIGATION KIT

Greenery, cared for over time.

The irrigation kit makes plant care easier and allows watering to be scheduled. Plant species, water availability and management are selected to suit the site.
